Notice Interpreting In Re Iwahashi (Fed. Cir. 1989)

The Patent and Trademark Office's (PTO's) policy on the patentability of claims reciting matematical algorithms and computer programs, published at 1106 Off. Gaz. Pat. Office 5-12 (Sept. 5, 1989), is unaffected by *In re Iwahashi*, 888 F.2d 1370, 12 USPQ2d 1980 (Fed. Cir. 1989). The following comments are intended as the PTO's interpretation of *Iwahashi*.

Iwahashi reversed a rejection of appellants' apparatus claim 1 (the sole claim) under 35 U.S.C. §101. The rejection maintained that claim 1 was directed to nonstatutory subject matter in the form of a mathematical algorithm. Appellants developed an approximation to the conventional equation for auto-correlation coefficients for use in pattern recognition which uses a term which is the square of the sum of two variables, instead of the product of the two variables. Appellants' claim to an autocorrelation unit is in "means-plus-function" format except for a recited "read only memory" ("ROM") for implementing the squaring term. PTO argued that the term "read only memory" as used in this claim is as broad as a means-plus-function recitation with the result that the claim is effectively entirely in means-plus-function format and indistinguishable for §101 purposes from a method claim; it was argued that such a corresponding method claim would be nonstatutory. *See In re Freeman*, 573 F.2d 1237, 1247, 197 USPQ 464, 472 (CCPA 1978); *In re Walter*, 618 F.2d 758, 768, 205 USPQ 397, 407-08 (CCPA 1980); *In re Abele*, 684 F.2d 902, 909, 214 USPQ 682, 688 (CCPA 1982); *In re Meyer*, 688 F.2d 789, 796, 215 USPQ 193, 198-99 (CCPA 1982); and 1106 Off. Gaz. Pat. Office at 8, under "'Process' versus 'apparatus' claims." PTO also argued that appellants' apparatus claim is nonstatutory when directly analyzed according to the two-part *Freeman-Walter* test because (1) it recites a mathematical algorithm and (2) the algorithm does not "define" a structural relationship between physical elements and is not "applied" in any manner to physical elements.

The Federal Circuit determined that a read only memory is a "term[] well understood by those skilled in the art," 888 F.2d at 1372, 12 USPQ2d at 1909, and that the claimed read only memory element "is not in means-plus-function form," *id.* at 1373, 12 USPQ2d at 1909, but "is a specific piece of apparatus," *id.* at 1375, 12 USPQ2d at 1912. The Court states that appellants' apparatus claim does not meet the second part of the *Freeman-Walter* test, detailing the relationship between the ROM and the other means in the claim. Therefore, the Court concluded, *id.* at 1375, 12 USPQ2d at 1911:

> The claim as a whole certainly defines apparatus in the form of a combination of interrelated means and we cannot discern any logical reason why it should not be deemed statutory subject matter as either a machine or a manufacture as specified in §101. The fact that the apparatus operates according to an algorithm does not make it nonstatutory. . . . We therefore hold that the claim is directed to statutory subject matter.

Because the Court determined a ROM to be a specific piece of apparatus for implementing a table look-up function, and not as broad as a means-plus-function recitation, appellants carried their burden of demonstarting that the claim is "truly drawn to specific apparatus distinct from other apparatus capable of performing the identical functions," *Walter*, 618 F.2d at 768, 205 USPQ at 408; as a matter of claim interpretation, the claim cannot be treated as equivalent to a method. The *Walter* test for whether an apparatus claim is equivalent to a method claim is the same as applying the *Freeman-Walter* test to an apparatus claim. *See In re Maucorps*, 609 F.2d 481, 486, 203 USPQ 812, 816 (CCPA 1979) (application of second part of two-part *Freeman* test to appartus claim in "means for" format considers whether the "claimed invention as a whole comprises each and every means for carrying out a [mathematical algorithm]").

Once it is determined that the claim is truley drawn to specific apparatus, it necessarily follows that the apparatus is statutory subject matter under §101. True apparatus does not invoke the mathematical algorithm exception because the mathematical algorithm remains free for use by anyone not employing the specific apparatus, i.e., there is no preemption, in whole or part, of the mathematical algorithm itself. *See In re Bernhart*, 417 F.2d 1395, 1399, 163 USPQ 611, 616 (CCPA 1969) ("a member of the public would have to do much more than use the equations to infringe any of these [apparatus] claims"); *Freeman*, 573 F.2d at 1247 n.11, 197 USPQ at 472 n.11 ("the calculation method [in dependent claim 10] remained free for use by anyone not employing the enire apparatus of claim 9"). Importantly, as the *Iwahashi* Court notes: [t]he fact that apparatus operates according to an algorithm does not make it nonstatutory," 888 F.2d at 1375, 12 USPQ2d at 1911. *See Freeman*, 573 F.2d at 1247 n.10, 197 USPQ at 472 n.10 (" A claim to a new, useful, and unobvious computer, describing that computer in truly structural terms, would not be rejectable on the ground that the only known use for that computer is the performance of unpatentable methods of calculation.").

The Court's holding that the claim defines apparatus because of ROM is a specific piece of apparatus for implementing the mathematical algorithm is consistent with precedent and PTO policy as set forth at 1106 Off. Gaz. Pat. Office 5-12. Every case, however, must be determined on its facts and, to be consistent with previous decisions, *Iwahashi* does not "hold that the mere presence of apparatus language in a claim will, of itself, save that claim from rejection as nonstatutory." *id.* at 1247 n.11, 197 USPQ at 472 n.11. Under *Walter*, the inquiry with every apparatus claim should be whether the apparatus encompasses any and every means for performing the recited functions and, if this appears to be the case, the burden should be placed on the applicant to show that it does not.

The Court's dicta in footnote 1 (the sole footnote) suggests that §112 ¶6 may require the PTO to construe means-plus-function limitation to the apparatus disclosed in the application and equivalents thereof. Under this suggestion, even a claim which is *entirely* in means-plus-function format could not be treated as indistinguishable from a corresponding method claim for §101 purposes. Such a result would be directly contrary to precedent, including *Freeman*, *Walter*, *Abele* and *Meyer*. In the opinion of the PTO, means-plus-function limitations should be not treated differently for §101 purposes than for §102 and §103 purposes for rejections over prior art. Indeed, during prosecution claims should be given their broadest reasonable interpretation. *See In re Zletz*, ___ F.2d ___, ___, 13 USPQ2d 1320, 1321-22 (Fed. Cir. 1989). The issue of claim scope should be treated as a matter of burden of proof: examiners should give "means for" limitations their broadest reasonable interpretation and then it is applicant's burden to show that the functionally-defined disclosed means do not encompass any and every means for performing the recited functions. *See Walter*, 618 F. 2d at 768, 205 USPQ at 408 ("the burden must be placed on the applicant to demonstrate that the claims are truly drawn to specific apparatus"); *Meyer*, 688 F.2d at 796 n.6, 215 USPQ at 199 n.6 and corresponding text; *In re Mulder*, 716 F.2d 1542, 1549, 219 USPQ 189, 196 (Fed. Cir. 1983) (involving a "means for" limitation in a §103 rejection: "Appellants have neither asserted nor shown that [the reference] structure is not the equivalent of the structure disclosed in their specification [for performing the function, as stated by the board]").

Reference Collection of U.S. Patents Available for Public Use in Patent Depository Libraries

The following libraries, designated as Patent Depository Libraries (PDLs), receive current issues of U.S. Patents and maintain collections of earlier-issued patents. The scope of these collections varies from library to libary, ranging from patents of only recent years to all or most of the patents issued since 1790.

These patent collections, which are organized in patent number sequence, are available for use by the public free of charge. Each of the PDLs, in addition, offers supplemental reference publications of the U.S. Patent Classification System, including the *Manual of Classification, Index to the U.S. Patent Classification, Classification Definitions*, and provides technical staff assistance in their use to aid the public, in gaining effctive access to information contained in patents. CASSIS (Classification And Search Support Information System); which provides direct, on-line access to Patent and Trademark Office data, is available at all PDLs. Facilities for making paper copies of patents from either microfilm or paper collections are generally provided for a fee.

Since there are variations in the scope of patent collections among the PDLs and in their hours of service to the public, anyone contemplating use of the patents at a particular library is urged to contact that library, in advance, about its collection and hours in order to avert possible inconvenience.

SECTION 1.—INTERNATIONAL CLASSIFICATION

The short titles associated below with the international class numbers are terms designed merely for quick identification and are not an official part of the international classification. The full names of international classes are given in section 6.1 of the trademark rules of practice.

The designation "U.S. Cl." appearing in this section refers to the U.S. class in effect prior to Sep. 1, 1973 rather than the international class which applies to applications filed on or after that date. For adoption of international classification see notice in the OFFICIAL GAZETTE of Jun. 26, 1973 (911 O.G. TM 210).

SECTION 2.—INTERNATIONAL CLASSIFICATION

The short titles associated below with the international class numbers are terms designed merely for quick identification and are not an official part of the international classification. The full names of international classes are given in section 6.1 of the trademark rules of practice.

The designation "U.S. Cl." appearing in this section refers to the U.S. class in effect prior to Sep. 1, 1973 rather than the international class which applies to applications filed on or after that date. For adoption of international classification see notice in the OFFICIAL GAZETTE of Jun. 26, 1973 (911 O.G. TM 210).

Reference Collection of U.S. Patents Available for Public Use in Patent Depository Libraries

The following libraries, designated as Patent Depository Libraries (PDLs), receive current issues of U.S. Patents and maintain collections of earlier-issued patents. The scope of these collections varies from library to libary, ranging from patents of only recent years to all or most of the patents issued since 1790.

These patent collections, which are organized in patent number sequence, are available for use by the public free of charge. Each of the PDLs, in addition, offers supplemental reference publications of the U.S. Patent Classification System, including the *Manual of Classification, Index to the U.S. Patent Classification, Classification Definitions*, and provides technical staff assistance in their use to aid the public, in gaining effctive access to information contained in patents. CASSIS (Classification And Search Support Information System); which provides direct, on-line access to Patent and Trademark Office data, is available at all PDLs. Facilities for making paper copies of patents from either microfilm or paper collections are generally provided for a fee.

Since there are variations in the scope of patent collections among the PDLs and in their hours of service to the public, anyone contemplating use of the patents at a particular library is urged to contact that library, in advance, about its collection and hours in order to avert possible inconvenience.

SECTION 1.—INTERNATIONAL CLASSIFICATION

The short titles associated below with the international class numbers are terms designed merely for quick identification and are not an official part of the international classification. The full names of international classes are given in section 6.1 of the trademark rules of practice.

The designation "U.S. Cl." appearing in this section refers to the U.S. class in effect prior to Sep. 1, 1973 rather than the international class which applies to applications filed on or after that date. For adoption of international classification see notice in the OFFICIAL GAZETTE of Jun. 26, 1973 (911 O.G. TM 210).

SECTION 2.—INTERNATIONAL CLASSIFICATION

The short titles associated below with the international class numbers are terms designed merely for quick identification and are not an official part of the international classification. The full names of international classes are given in section 6.1 of the trademark rules of practice.

The designation "U.S. Cl." appearing in this section refers to the U.S. class in effect prior to Sep. 1, 1973 rather than the international class which applies to applications filed on or after that date. For adoption of international classification see notice in the OFFICIAL GAZETTE of Jun. 26, 1973 (911 O.G. TM 210).

Availability of Trademark Status Line

Beginning on Feb. 20, 1990, the U. S. Patent and Trademark Office provided access, via push button telephone, to current status and status date information for all federal trademark application and registration records maintained in the automated Trademark Reporting and Monitoring (TRAM) System. The Trademark Status Line will be available on (703) 557-8747 from 6:30 a. m. until midnight, Eastern Time, Monday through Friday.

The Trademark Status Line may be used from any push button telephone by entering a seven-digit registration number and the "#" symbol or an eight-digit serial number and the "#" symbol after the welcoming message and the tone. All calls will be answered in the order received. Callers may request information for up to five serial number or registration number records per call.

When requesting information for registration numbers under one million, add sufficient leading zeros to the registration number so that a total of seven digits are entered. For example, to get status information for Reg. No. 88,725 enter 0088725#.

When requesting information for applications, enter an eight-digit serial number that consists of the two-digit series code followed by the six-digit serial number PTO. The series code is determined by the filing date of the application. All applications filed before Mar. 31, 1905 are series code 70. Applications filed between Apr. 1, 1905 and Dec. 31, 1955 are series code 71. Applications filed between Jan. 1, 1956 and Aug. 31, 1973 are series code 72. Applications filed between Sept. 1, 1973 and Nov. 15, 1989 are series code 73. All applications filed on or after November 16, 1989 are series code 74.

When requesting information for serial numbers under 100,000 in any series code, add sufficient leading zeros to the serial number so that a total of six digits are entered after the series code. For example, to get status information for serial number 92,132 in series code 73, enter 73092132#.

The TRAM System contains records for all active federal trademark registrations and pending applications. The TRAM System also contains records for all federal trademark registrations and applications which became inactive after Mar. 31, 1982. Some earlier inactive records are also available.

The Trademark Status Line will provide current status information for all federal trademark application and registration records included in the TRAM System. The date that the record entered the current status is provided also. If additional information regarding the status of a trademark application or registration is required, call the Trademark Services division at (703) 557-5249 and request a status check.
